SPECIFICATIONS

<p>General</p>	<p>Proper installation torque is required for any bolted connection to achieve low PIM performance. Too much torque can result in bracket deformation and too little torque can result in loose metal-to-metal contact. ConcealFab has determined the optimum torque for each of its PIM Shield cable support systems and offers convenient, fixed torque wrenches for each torque requirement.</p>		
<p>Torque requirements</p>	<p>Required torque values are shown on ConcealFab's installation instructions.</p>
