

Make Your School Safer & More Successful

With Strong & Reliable Cellular Signal

In schools, connectivity is crucial for both safety and learning. But approximately 70% of K-12* schools still face significant connectivity challenges. Without reliable cellular signal, safety suffers:

- Emergency calls are dropped
- Staff can't communicate
- Students and families lose touch
- Messages are missed or delayed
- Educational apps and platforms
- Digital textbooks & multimedia learning

Especially in an emergency, cell phones become safety devices. But without reliable signal, critical minutes are lost.

Ensure Rapid Communication When Seconds Count.

Experts estimate that as many as 10,000 lives per year could be saved by reducing 911 response time by 60 seconds. WilsonPro connectivity infrastructure solutions support safer schools by delivering fast and reliable wireless communication.

Amplify Peace of Mind.

WilsonPro provides schools with strong connectivity via Distributed Antenna Systems (DAS) systems that receive, amplify, and redistribute existing cellular and RF signals, including critical emergency communication. Depending on the DAS solution deployed, the network will support:

- All cellular networks plus two-way radio and public safety bands
- FirstNet, used by first responders for on-site connectivity in a crisis
- Safety-rated remote radio units

Is Your School Future-Ready?

For over 30 years, WilsonPro has been developing adaptable connectivity that powers future readiness, resulting in 180+ patents. Let's empower your students with the safety and learning advantages only robust connectivity can bring.

WilsonPro is Your Partner for the Safety and Success of Every Student.

- 1,000+ installations in 30+ countries; over 2M products sold
- Proud U.S.A. company with offices in Utah and Texas

*K12 Dive. (2021, January 5). Report: 67% of schools lack recommended internet connectivity speed.

“The current environment demands that institutions be more agile and deliberate about connecting and integrating the various offices around campus in planning for, averting, and managing the aftermath of a crisis.” - Deloitte

Westford Academy, a public high school in MA, used a WilsonPro Repeater System to ensure that everyone would be able to communicate in emergency situations. According to their director of technology, “This was a major investment with the primary goal of ensuring safety.”

At Art City Elementary, the teachers, parents, and staff all reported problems making or receiving phone calls. Some teachers had to stand next to a window to get a signal. Once they had installed their WilsonPro signal repeater system, “everyone felt a sense of comfort being able to make calls.”
